SUMMARY

I am a self taught developer and a computer engineering graduate fresher looking to enhance my skills.

KEY SKILLS

Node JS

Express JS

MongoDB

Mongoose

JavaScript

JSON

AJAX

HTML

CSS

INTERNSHIPS

PROFESSIONAL EXPERIENCE

No experience yet

EDUCATION

BE Computer Engineering

Aug '15 - Nov'20

Rajiv Gandhi Institute of Technology

CGPA: 5.7

HSC

June 2015

Bhavans College

Percentage: 68%

SSC

May 2013

Bhavans A.H. Wadia school

Percentage: 86%

SELECTED PROJECTS

The Weather Application:

An app that fetches the weather and forecast details of whichever location you input. It uses two APIs to do so. The WeatherStack API which actually fetches the weather based on input Latitude and Longitude and the Mapbox API which returns the Latitude and Longitude of any given input location, very accurately.

Link: <https://shocker-weather-application.herokuapp.com/>.

Storybooks Application:

This is similar to a social media app, where registered users can share text stories with other registered users. The app uses MongoDB for storing user data. It also has login with Google feature using Google OAuth20 from Passport.js. The stories that a user creates can either be public or private. If set to public, any user can view the story. If set to private, only the creator of the story can view it. When a user first logs in, he is taken to a dashboard page where he can create, view(public and private), edit or delete his stories. The app provides a sidebar with the option of viewing others' public stories and also gives the user an option to log out.

I have built backends for many different kinds of software management systems. Backend for shopping cart, school management system, task-managers, chat applications.

EXTRACURRICULAR ACTIVITIES

Mixed martial arts

CO-CURRICULAR ACTIVITIES

I enjoy reading programming books. Currently on the book 'You don't know JavaScript'
